KEY FEATURES

- Manufactured using new Lead-Tin-Calcium Alloy that helps to deliver higher cranking current and longer shelf life.
- High cranking power to weight ratio ensures excellent Vehicle starting ability.
- Low self-discharge ensures START even after idling for long
- Less variance in weight compared to Conventional battery improves consistency & reliability in product performance.
- Duplex Cover design improves Spill-proof Characteristics
- Effective flame arrestors with micro porous filter disc in vent openings to arrest acid fumes and restrict spark propagation inside the battery which enhances safety
- Special self-locking Handle design reduces chance of accident due to come out of Handle from battery.

- Imported separator, reinforced with texturized mat provides surface support to the active material, improving cycle life
- Magic Eye for determination Electrolyte level & state of charge
